Welcome to the fourth edition of this project newsletter

**Scarborough Spa Slope Stabilisation Scheme**

Works are currently going well on the cliff behind Scarborough Spa. All the structural works involving soil nails and piling works are now complete.

We would like to extend our thanks to all the local residents and businesses for their ongoing co-operation and understanding.
All the heavy plant and drilling rigs have now been moved off the cliff and transported off site. We recently hired a 250 ton crane to lift the heavy plant and materials off the cliff from down at the Spa road. Our specialist subcontractors CAN and Keller have now demobilised.

Ongoing works include the installation of a geocell soil retention system. The photograph below shows this product being installed.
Once the geocell is installed it is filled with topsoil. The initial works have just started for which we are using a long reach 30 ton excavator on the Esplanade. The excavator lifts and loads the soil over the promenade fence and will be filling all the upper slope levels as shown in pictures below.

This week we will be starting the next placement method which will be placing the soil from the Esplanade using a mobile crane.
Pupils from Brompton Hall School came for a site visit and scheme presentation.

Members of the site team attended a career's fair at Ripon Grammar School.

We provided a local singer to entertain residents at St Helen’s Nursing Home.
Fortnightly Drop in Session

Fortnightly drop in sessions are held every first and third Monday of the month (except Bank Holidays) between 12.30pm and 1.30pm at our site office. If anyone has questions or queries regarding the project you are more than welcome to come along.

The site office is located in the Albion Road car park, YO11 2BT.

Considerate Constructors Scheme

The project has voluntarily registered under the Considerate Constructors Scheme, meaning that along with our supply chain, we will agree to abide by the Code of Considerate best practice beyond statutory requirements. We received a score of 48 out of 50 on the second site inspection.

Safety of the highest importance

Balfour Beatty operates a Zero Harm Health and Safety policy. The focus of this is to highlight the responsibility each member of staff has for working safely whenever and wherever we are involved in activities for the company. In 2008 ambitious targets were set to push the boundaries of performance in Health and Safety. Since then we have made significant progress. Many of our activities around the world are being delivered accident and incident free, Zero Harm is still our aim.
Future Works

Following on from the topsoiling works we will be grass seeding and planting, installing new drainage, building new walls, resurfacing footpaths and installing new fencing.

Traffic Management

Traffic management will remain in place throughout the project. We thank you for your continued patience and understanding. The Esplanade remains closed and the traffic management will be adjusted around the crane working at the Prince of Wales Terrace junction.

Charity Highlights From The Team

The site team and sub-contractors CAN and Keller’s donated Easter Eggs to St Catherine’s Hospice and Cherry Tree Children’s Centre.
Upcoming Events

Balfour Beatty is hosting a Construction Live session on Wednesday 12th June at 10.00am from Scarborough College. This is a live streamed event that will be broadcast to thousands across the UK wanting to find out more about construction in 2019 and the exciting developments happening within the sector.

Construction Live is a fully produced and interactive online broadcast aimed at engaging young people and wider stakeholders in Construction, Infrastructure and Civil Engineering. The broadcast will include a cast of industry professionals, apprentices and graduates who will talk passionately about their careers and inspire people to want to work in the industry, through a mixture of live Q&A and pre-recorded videos.

The panel of six industry professionals will comprise of young and senior professionals from within the Scarborough Spa delivery team, including Balfour Beatty, the design team, our supply chain and the Environment Agency.

The event will focus on commercial roles, rope access and client/design professionals in the industry, expanding on the previous two broadcasts covering Engineering, as well as answering the question “Why invest in flood and coastal protection?”

Through the interactive nature of the broadcast we can help to achieve a wide variety of corporate social responsibility targets, as well as engaging with hard to reach stakeholders to convey meaningful messages.

A recording of the event will also be made available to schools to distribute to students and parents as a valuable learning resource.
